

Issue Installing Ubuntu In latest Acer Laptops Models Aspire ESI-571...etc

You can install Ubuntu 64bit Successfully without no errors

Boot only Windows boot manager

Boot repair can't work

can not even disable secure boot....

ചില സിസ്റ്റങ്ങളിൽ ബൂട്ട് മെനൂവിന്റെ കൂടെ ഉബുണ്ടു എഴുതി കാണിക്കാറുണ്ട്.

സെലക്ട് ചെയ്യാൽ ഉബുണ്ടുവിൽ എത്തിച്ചേരാം..

ഇവിടെ അതുപോലും കാണിക്കില്ല.

The solution is as follows

In your windows select power

Hold Shift key then click restart

Select advanced...change UEFI firmware settings then click restart

System goes to Bios settings

First set a superuser password

warning Remember and share it(You can not goes to bios again without this password)

Select an UEFI file as trusted from executing

and press enter

select HDDD

and press enter

Select UEFI

and press enter

select grubx64.efi

and press enter

You are Prompted to give a name of your OS

Give a name such as Ubuntu or Linux and save and exit.

Now Every time when booting press f12 and goes to boot menu.

Here You can select Your distro name already given and boot in to your OS.

Tried to change boot sequence using grub customiser.....

No Hope... No grub menu when system restarts.....

Some Acer systems has wifi issues It has no wifi in 14.04.4

It has some some advanced wifi hardware .

Suggest to upgrade to 16.04 and I think the new kernal of 16.04 may include it's wifi kernal modules.
