

UBUNTU 14.04.1

Edubuntu 14.04.1 with all packages and resources customised with latest kernel suited for all machines

- Downgraded the version of geogebra for running java applets
- Icedtea web plugin removed and add Oracle java plugin(No other way now to solve the issued tea webplugin faces more issues)

Activating java plugin

Open Firefox then tools-addones-plugins.Click Java Plugin Select always activate option

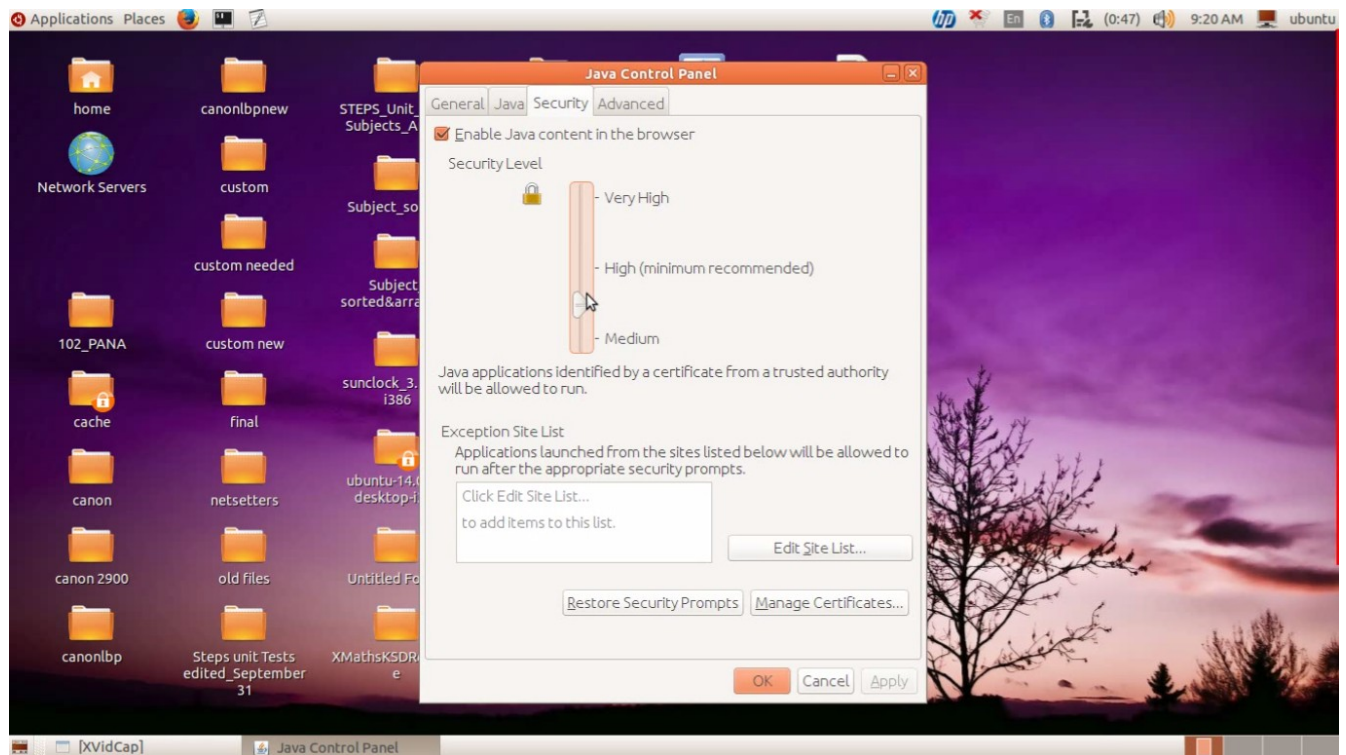

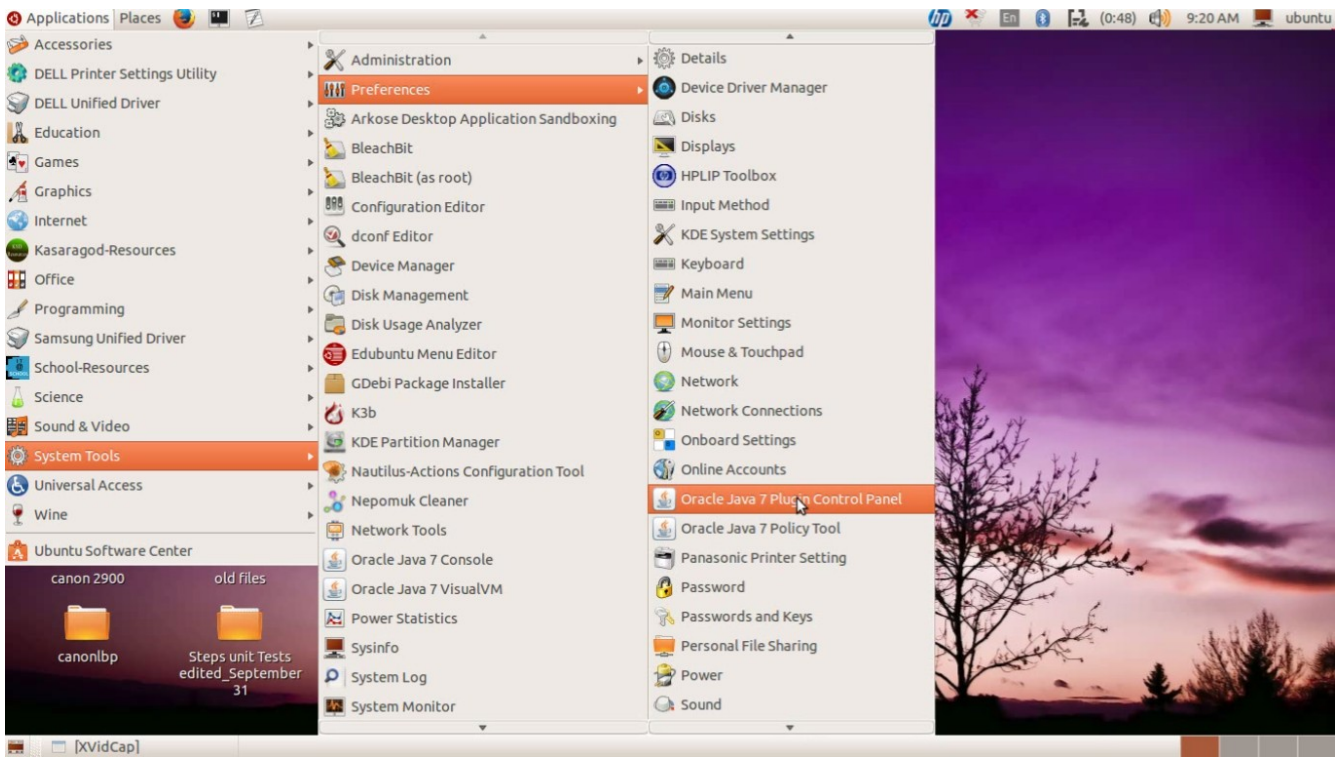

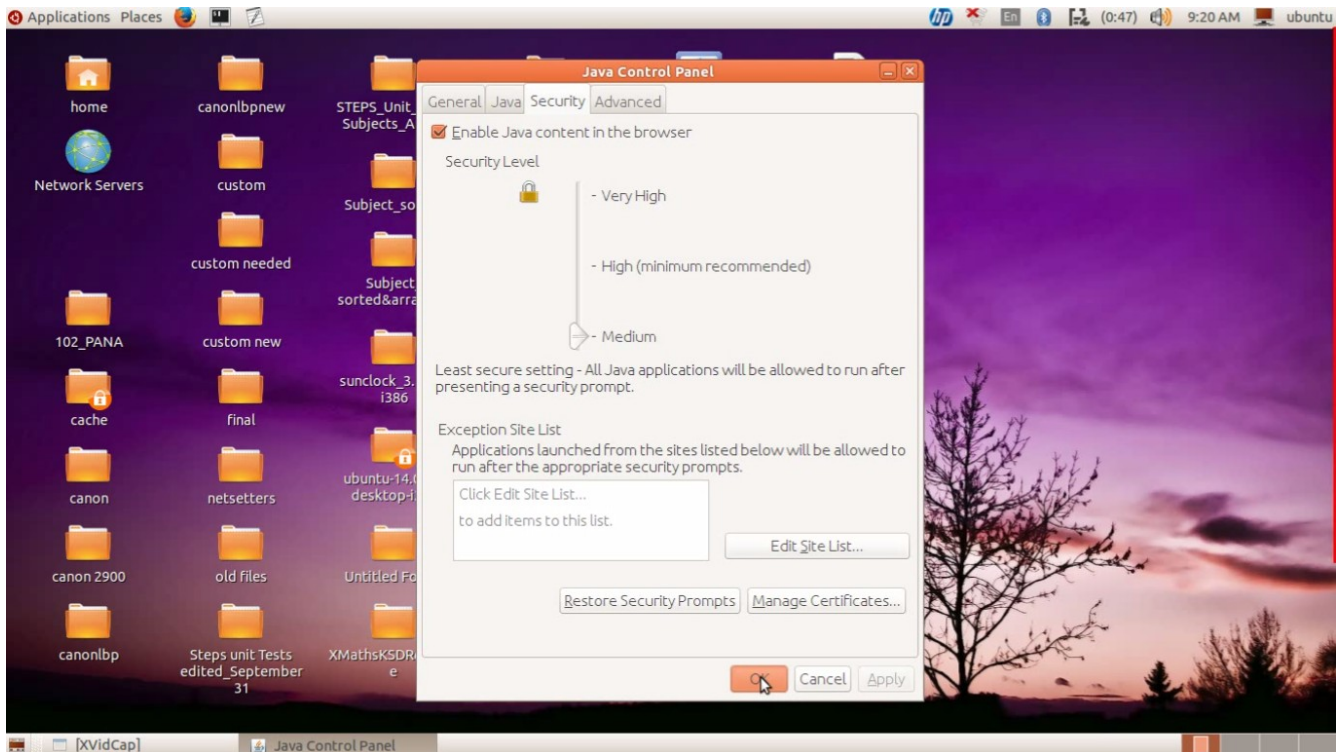

Applications-system tools-preference

click oracle java 7 plugin control

click security

drag the level to Medium then apply -ok

Now you can use java plugin!

PRINTER ISSUE

Almost all available printers added just like 12.04 but Printer Automatic configuration failed you may manually add printers and it will be detected there.

[You may read 12.04 Release notes for more details from here.](#)

No additional drivers for broadcom drivers are needed ! You may detect wifi and other drivers in Dell,Lenova,HP.....Machines and all are supported !

Any Suggestions! [Enter here!](#)
